

Fixed Number Anywhere . . .

A new service that allows customers to have a fixed number that goes straight through to their mobile.

WHO IS IT FOR?

Business Customers

- Smaller businesses can look larger and more established - having fixed numbers gives scale and credibility.
- Large businesses can have that local touch - local fixed line numbers can help bigger businesses seem approachable, contactable and just around the corner. This is especially handy for those who have field based people - sales, engineers and so on.

Why should customers choose Fixed Number Anywhere?

Attract more business

- Never miss another opportunity - no more missed calls.
- All the benefits of a landline number without the associated costs and there's no need to move equipment if a customer relocates.
- Flexibility - customers can link multiple fixed numbers to one mobile and vice-versa.

Smaller businesses

- Increased scale & reach - national presence or local presence in multiple areas.
- Creditibility - some customers don't trust businesses that only publish a mobile number. Create the impression of a fixed location.

Larger businesses

- Local presence - without the costs associated with regional offices.
- Appear approachable, contactable and just around the corner.

Business people are spending more and more time away from their desks, offices and homes - Fixed Number Anywhere gives them the benefits of a mobile and fixed number - on one service.

- No costly diverts
- No hassle
- No more missed opportunities

With Fixed Number Anywhere, customers have one phone, one supplier, one bill and one voicemail box.

It's easy to get up and running . . .

Customers can keep their existing BT fixed number by transferring it over to us. Or we can set up a brand new number for them - they can choose from a local 'geographical number' (starting from 01 or 02) or an 0800 number.
